

The  
**trademark** for  
fan manufacturing  
of the future

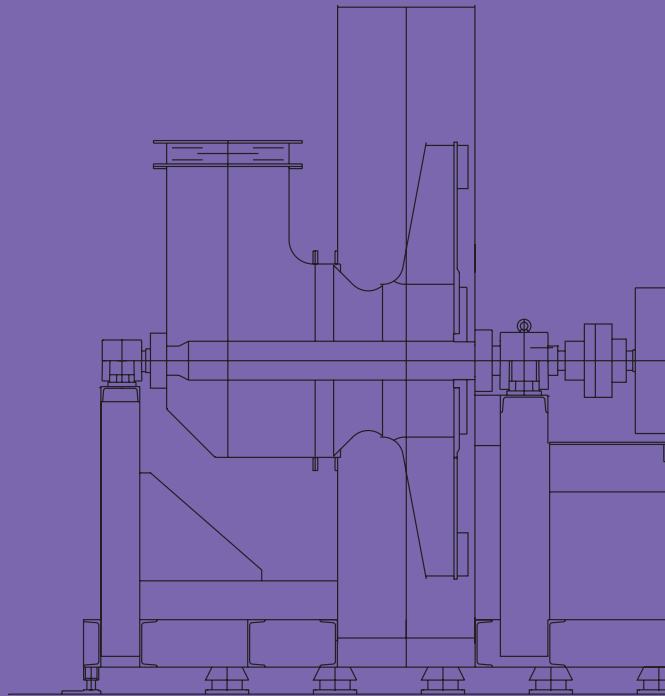

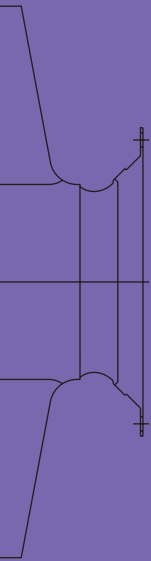

**POLLRICHDLK<sup>®</sup>**  
**FAN FACTORIES**

# About the art of manufacturing the best fans – and why we want to convince you of the advantages of the worldwide only supplier of „**Integrated solutions for industrial fan systems**“.

We are using our **broad expertise** to enable you to make the right selection: Cost-optimised designs – from industrial fans for special applications to series produced standard ranges.

# PLANT & BUILDING OEM TUNNEL

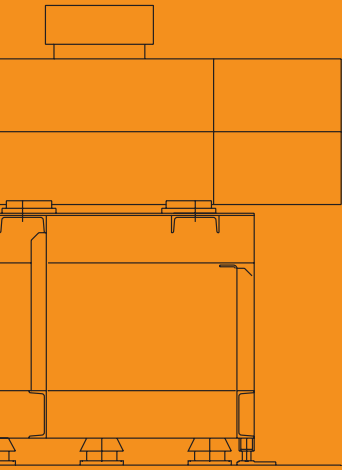

There are only a few fan manufacturers **worldwide** who are able to offer such a long-term experience as Pollrich Ventilatoren GmbH in Mönchengladbach and DLK Ventilatoren GmbH in Berlichingen.

Both companies are experts in their fields. Heavy-duty centrifugal fans are manufactured by Pollrich since 1906 and axial fans are produced by DLK since 1974.

## Heavy-duty industrial centrifugal fans

PLANT & BUILDING  
OEM  
TUNNEL  
SHIP  
CAR PARK

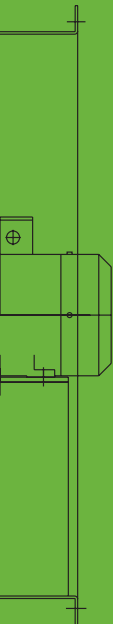

Now, an appropriate **industrial solution** can be provided by just one and the same trademark – whatever the medium to be **aerodynamically** conveyed may be.

If it concerns the small blower for machine cooling or the giant power plant fan with a flow rate of 1 Mio. m<sup>3</sup>/h and a drive power of 4 MW (4,000kW): This diversity – organised in five product categories for five main fields of application allows competence to become visible and recognisable – competence everyone can benefit from.

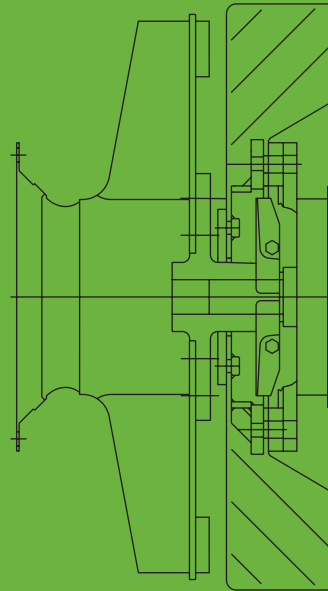

**Compact** industrial centrifugal fans

# PLANT & BUILDING OEM TUNNEL SHIP CAR PARK

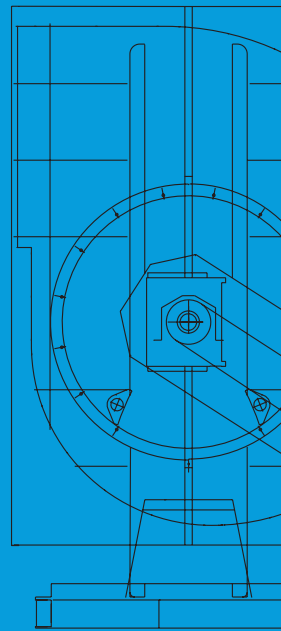

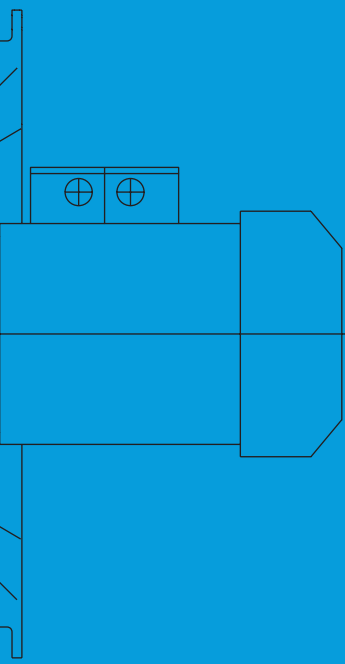

Regardless if series production or single piece manufacturing, we produce both under the same conditions – a mixture of standardisation, extremely refined variant management, well structured organisation, intelligently managed personnel placement and always in line with the customer specific requirements.

The fan meeting the requested operating point is individually determined out of a vast number of **pre-configured** combinations – with the ideal size, the matching impeller and the specific application-oriented characteristics.

**Axial** fans

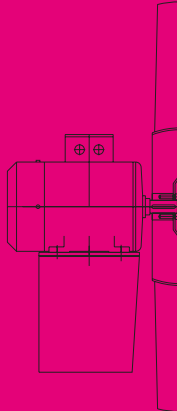

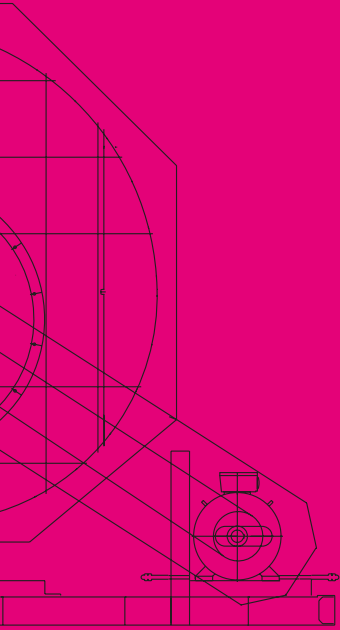

# PLANT & BUILDING OEM

Under this trademark there is no second quality, but always the best solution for the specific process – including the corresponding technical back-up strategies for ideal **operating reliability** of the complete system and its commercial benefit.

**Plug fans**

# PLANT & BUILDING TUNNEL CAR PARK

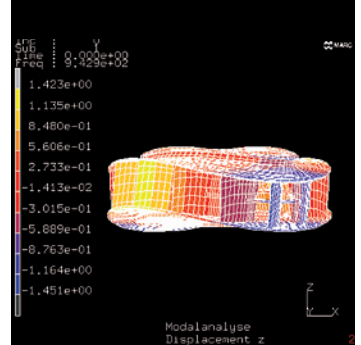

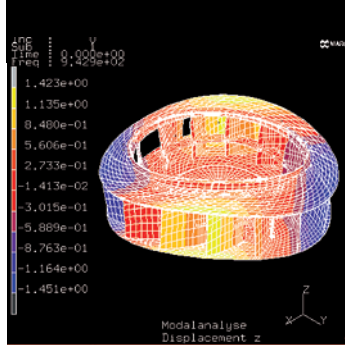

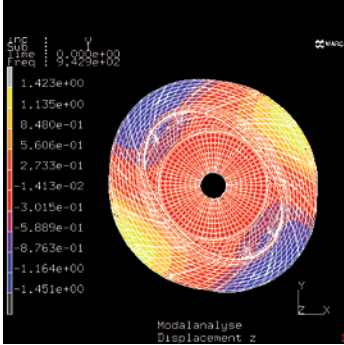

An adequate **supply chain strategy** is essential for this: For our customers, for us and for our suppliers – since the complete demand of the most diverse fans for a project will be provided by one source in the future.

Whether it is required to equip a plant itself, to ventilate an underground car park or if the air conveyance of a secondary process is concerned – each of these fans will be labelled **Pollrich DLK Fan Factories**.

Smoke extraction fans

The merging of two companies is also in this industry neither new nor a novelty.

However, until now, our vision is unique – to be perceived as a brand manufacturer providing solutions for every fan related concern. The vision to consider **complexity**, arising from special customer requests, as opportunity and furthermore to establish this as **unique selling proposition**.

With the support of our **own R&D team**, this generates new products and manufacturing processes. Products and processes revolutionising every existing solution in terms of benefits and efficiency compared to the usual occurring costs.

This applies across the various product categories, each provided with pinpoint accuracy layout and process related material characteristics.

In addition, a worldwide service-team is taking care of all customers in **any industry**.

# Research & Development

**Service-hotline:**

fon +49(0)2161- 968 184

fax +49(0)2161- 968 307

service@pollrich.com

Our service-team is available for you around-the-clock.

- Technical advice
- Assembly
- Commissioning
- Performance tests
- Noise and vibration measurements
- Inspection
- Preventative maintenance
- Maintenance and repair
- Electronic balancing
- System optimisation

**Service days last 24 hours**

The modern quality management methods of our after sales and customer support centre ensure you quality standard, reliability and efficiency.

Since fans belong to a great extend to the process determining factors of your business, we offer our service and assistance to you regardless of your fan supplier anywhere in the world within the shortest possible time if assistance is requested.
